IG11145 **BASTER, J., 1759-1765 (1ST ED.).** €3000,00

Natuurkundige Uitspanningen, behelzende eenige waarneemingen, over sommige Zee-Planten en Zee-Insecten, benevens derzelve zaadhuisjes en ijernesten; Two vols in one. 169, [4], 167, [4] p., 29 plates of which 27 are hand coloured, contemporary half, spine gilt, boards covered with Dutch marbled (spickled) paper (a few pieces of paper missing), outer edges with wear due to use, but spine is complete and binding is tight. Old library ex libris at verso front cover. A few pages with some faint foxing but the great majority of pages and all plates clean. Baster's book appeared in six instalments, each with a separate title-page which were often discarded when bound (they are not present in this copy), and replaced by two general title-pages for the volumes (as in this copy).

Baster's book has become famous for being one of the first describing and depicting a local marine fauna, and including the smaller, less obvious animals in his works. His book has become very rare, and we have the pleasure to offer a first Dutch edition (dated 1762-1765, but actually appeared between 1759 and 1765) with almost all plates hand coloured.

We also have on offer the work by Slabber (1769-1778) who followed in Baster's footsteps; please inquire.

IG07281 **BOHADSCH, J.B., 1761.** €760,00 [Picture on our website!](#)

De quibusdam animalibus marinis, eorumque proprietatibus, orbi litterario vel nondum vel minus notis, liber; [18], 169 p., 12 folded engraved pls, title-page with vignette, and another large vignette depicting a portrait (of the author?), contemporary full calf, spine gilt (skilfully rebacked), contemporary marbled end papers. Small, faint library stamp on title-page. A little unobtrusive worming in the inner margin of first few pages. Some scattered foxing spots but mostly clean.

The scarce first edition, there was a later German edition in 1776. This work mainly treats Molluscs (Mainly Nudibranchs) and Coelenterates. The first five plates depict Seahares and Nudibranchs and their anatomy, Plates 6-7 depict Holothurians, Plates 8-9 depict Coelenterates (Sea pens and Alcyonaria), Plate 10 depicts Tunicates, Plate 11 depicts shark and ray's eggs, Plate 12 depicts eggs of Squid. Johann Baptist Bohadsch (1724-1768) was a scientist from Prague who visited Italy in 1757-1759 and studied and draw lesser known marine invertebrates. Caprotti p. 46.
